13 What We Learned Key takeaways from the project		

01 | Project Overview

About freeCodeCamp

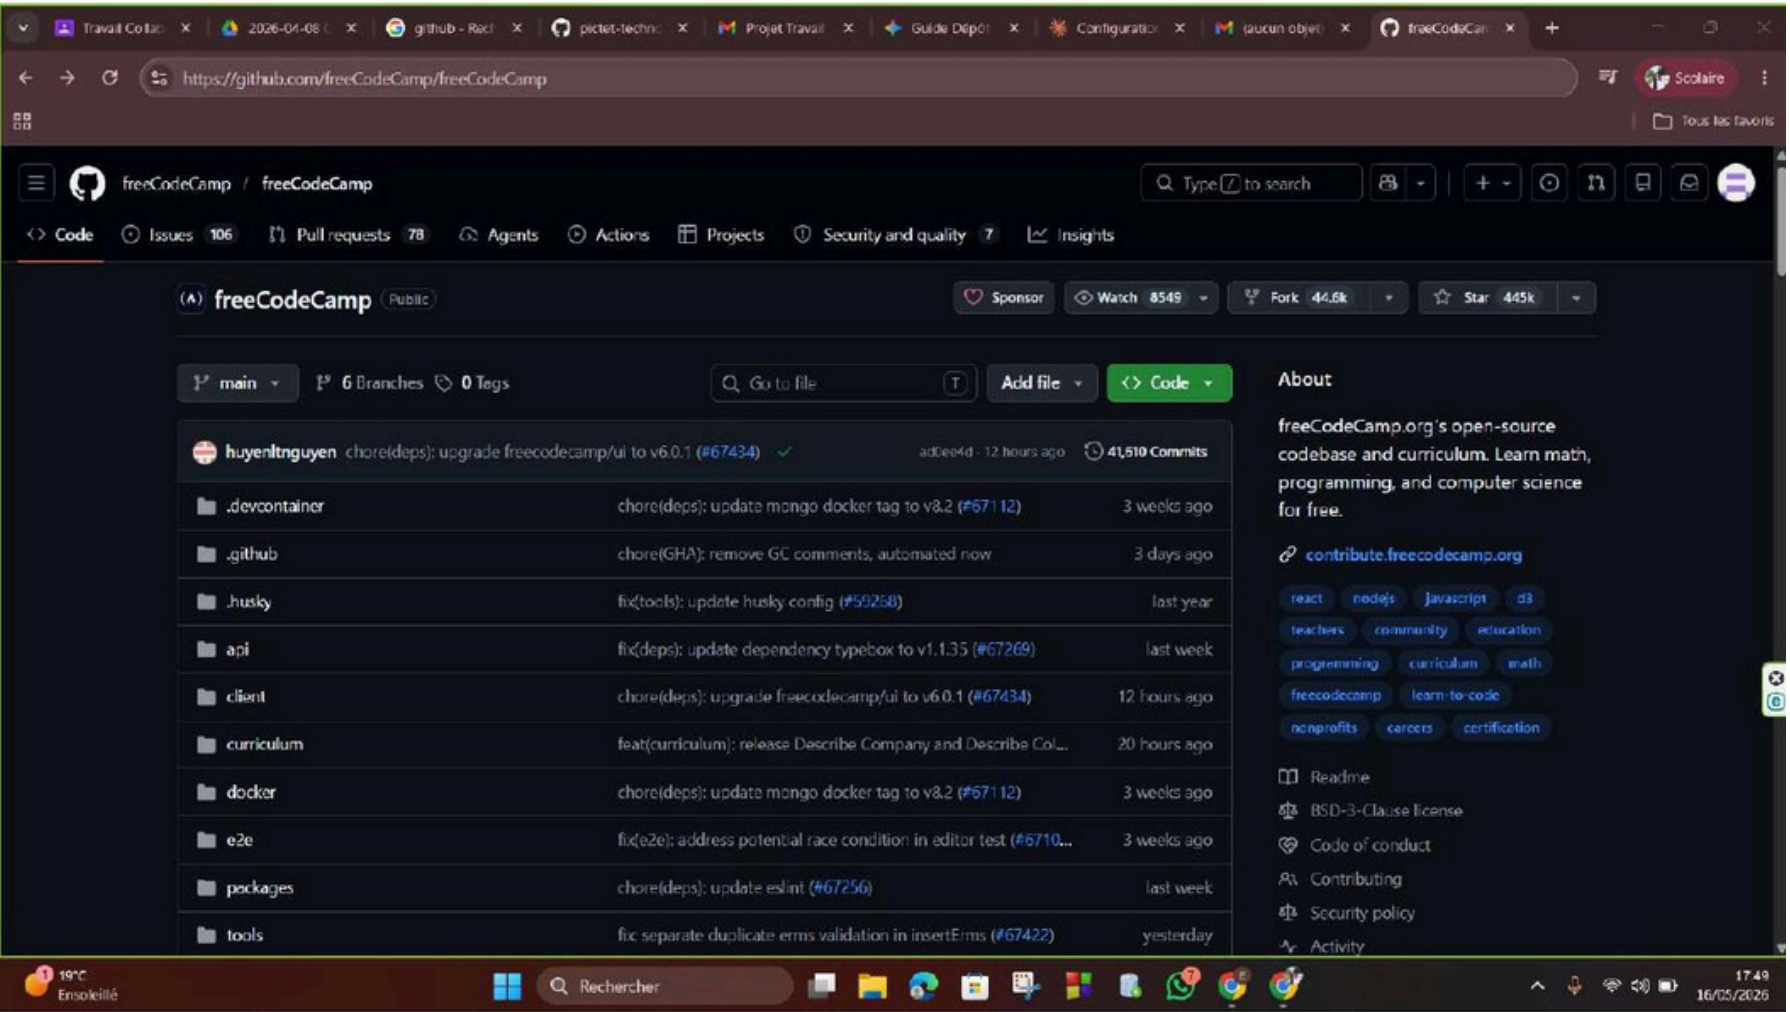

freeCodeCamp (freeCodeCamp.org) is a non-profit, open-source platform that teaches web development, algorithms, data structures, Python, APIs, databases, and computer science entirely for free.

With 445,000+ GitHub stars and 44,600+ forks, it is one of the largest open-source education projects in the world. Its curriculum covers HTML, CSS, JavaScript, React, Node.js, SQL, and more.

Our Objective

Fork this repository, work as a team on separate branches, commit and push changes, open Pull Requests, and practice the complete collaborative Git & GitHub workflow on a real open-source codebase.

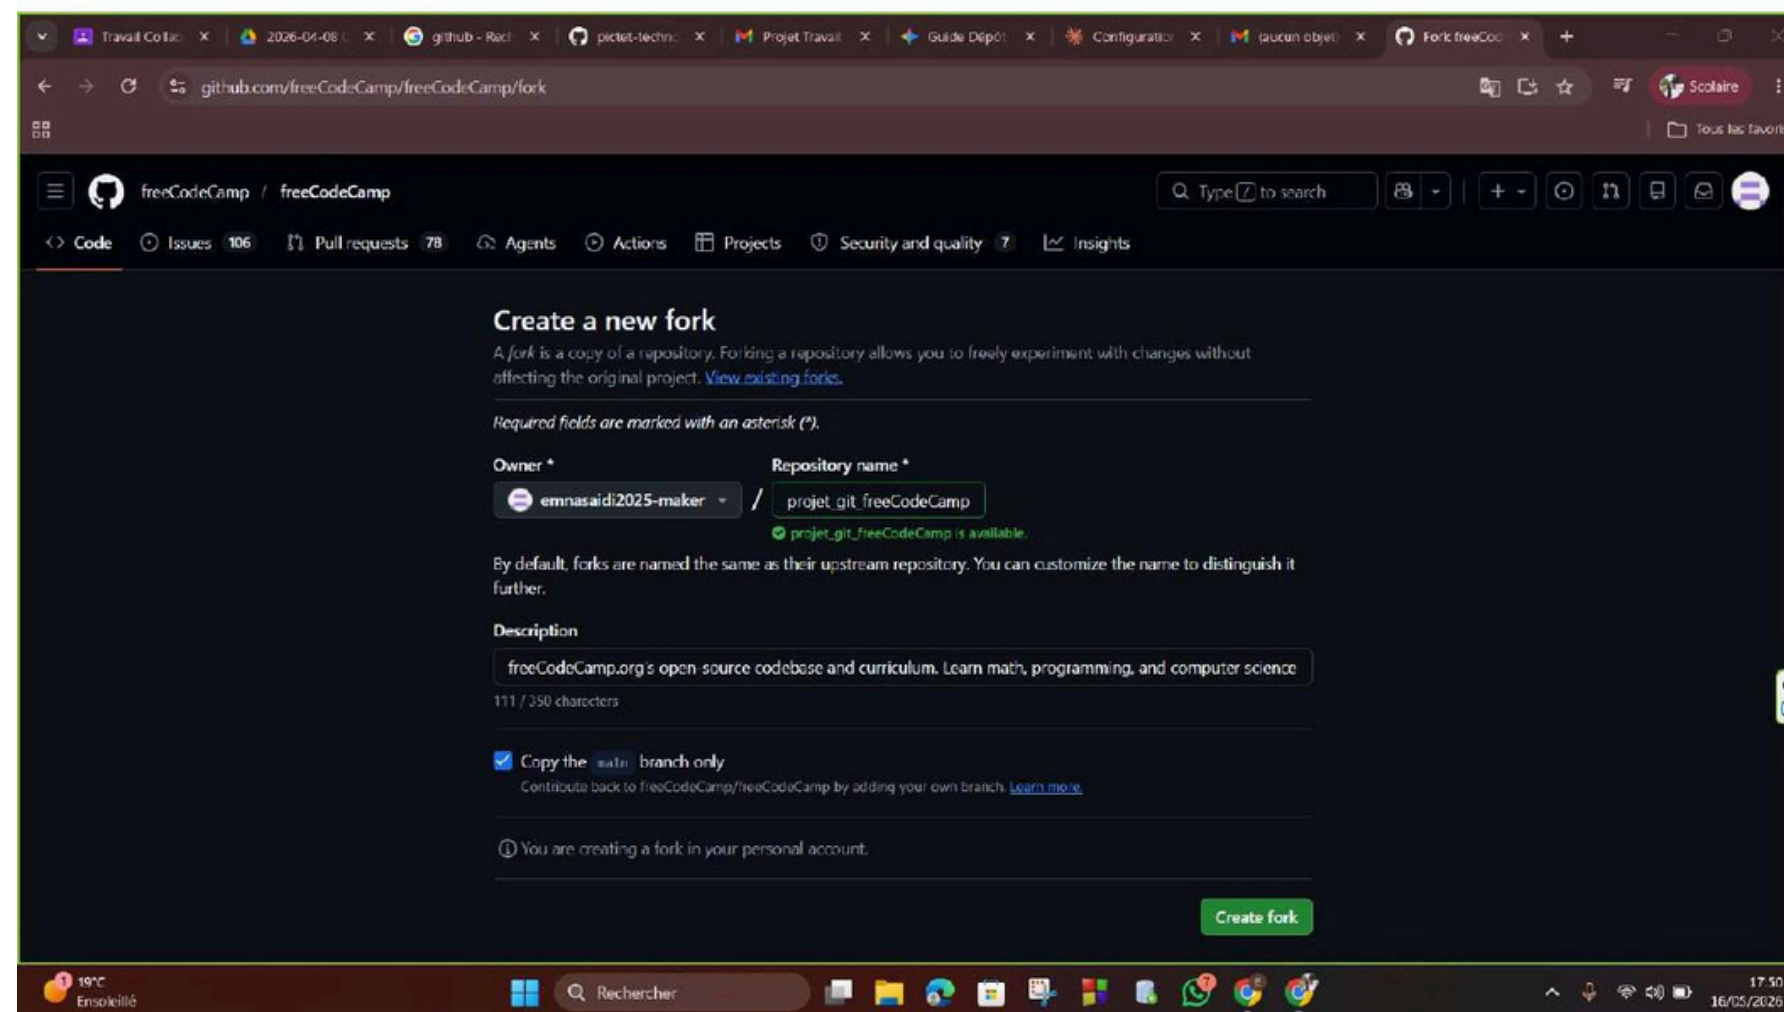

Source:	freeCodeCamp / freeCodeCamp
Our Fork:	emnasaidi2025-maker / projet_git_freeCodeCamp
Stars:	445k+ Forks: 44.6k
License:	BSD-3-Clause

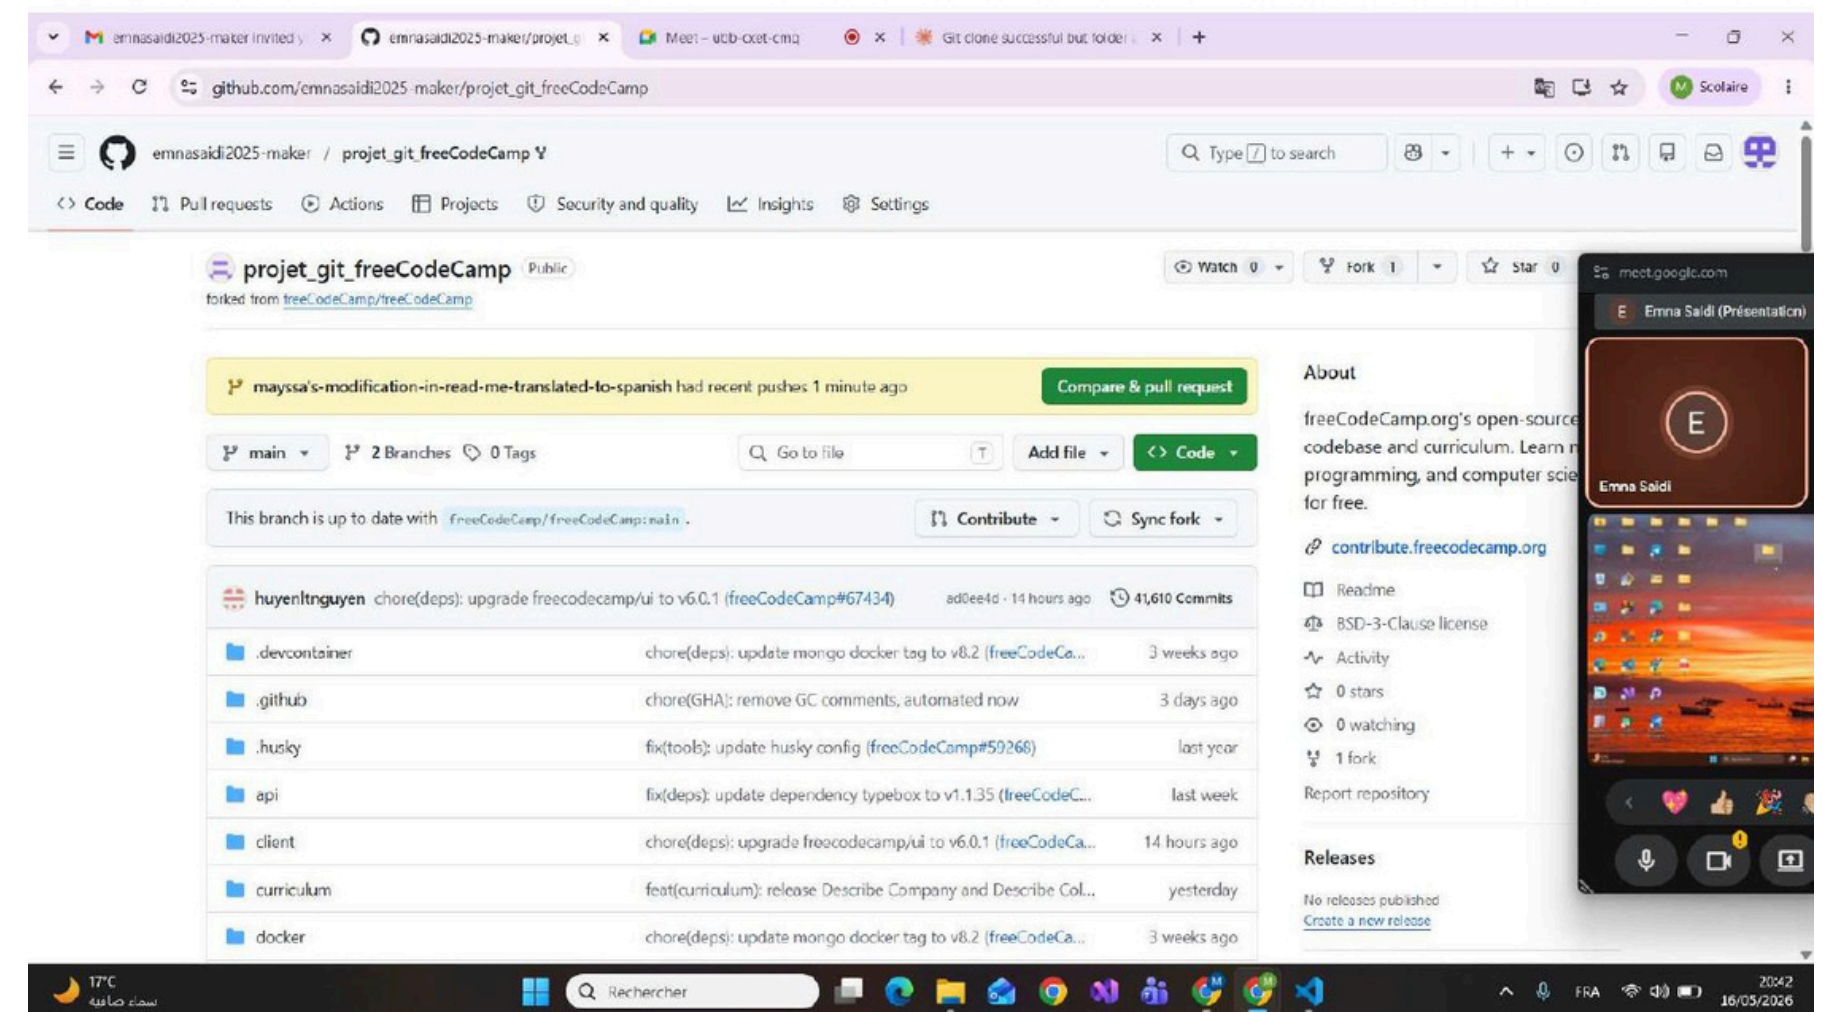

freeCodeCamp official GitHub repository — 445k stars, open-source curriculum

02 | Fork the Repository

We navigated to github.com/freeCodeCamp/freeCodeCamp and clicked Fork to create a personal copy of the repository under the account `emnasaidi2025-maker`. We named it `projet_git_freeCodeCamp` and clicked Create fork. This gave us a full independent copy of the codebase where we could freely make changes without affecting the original project.

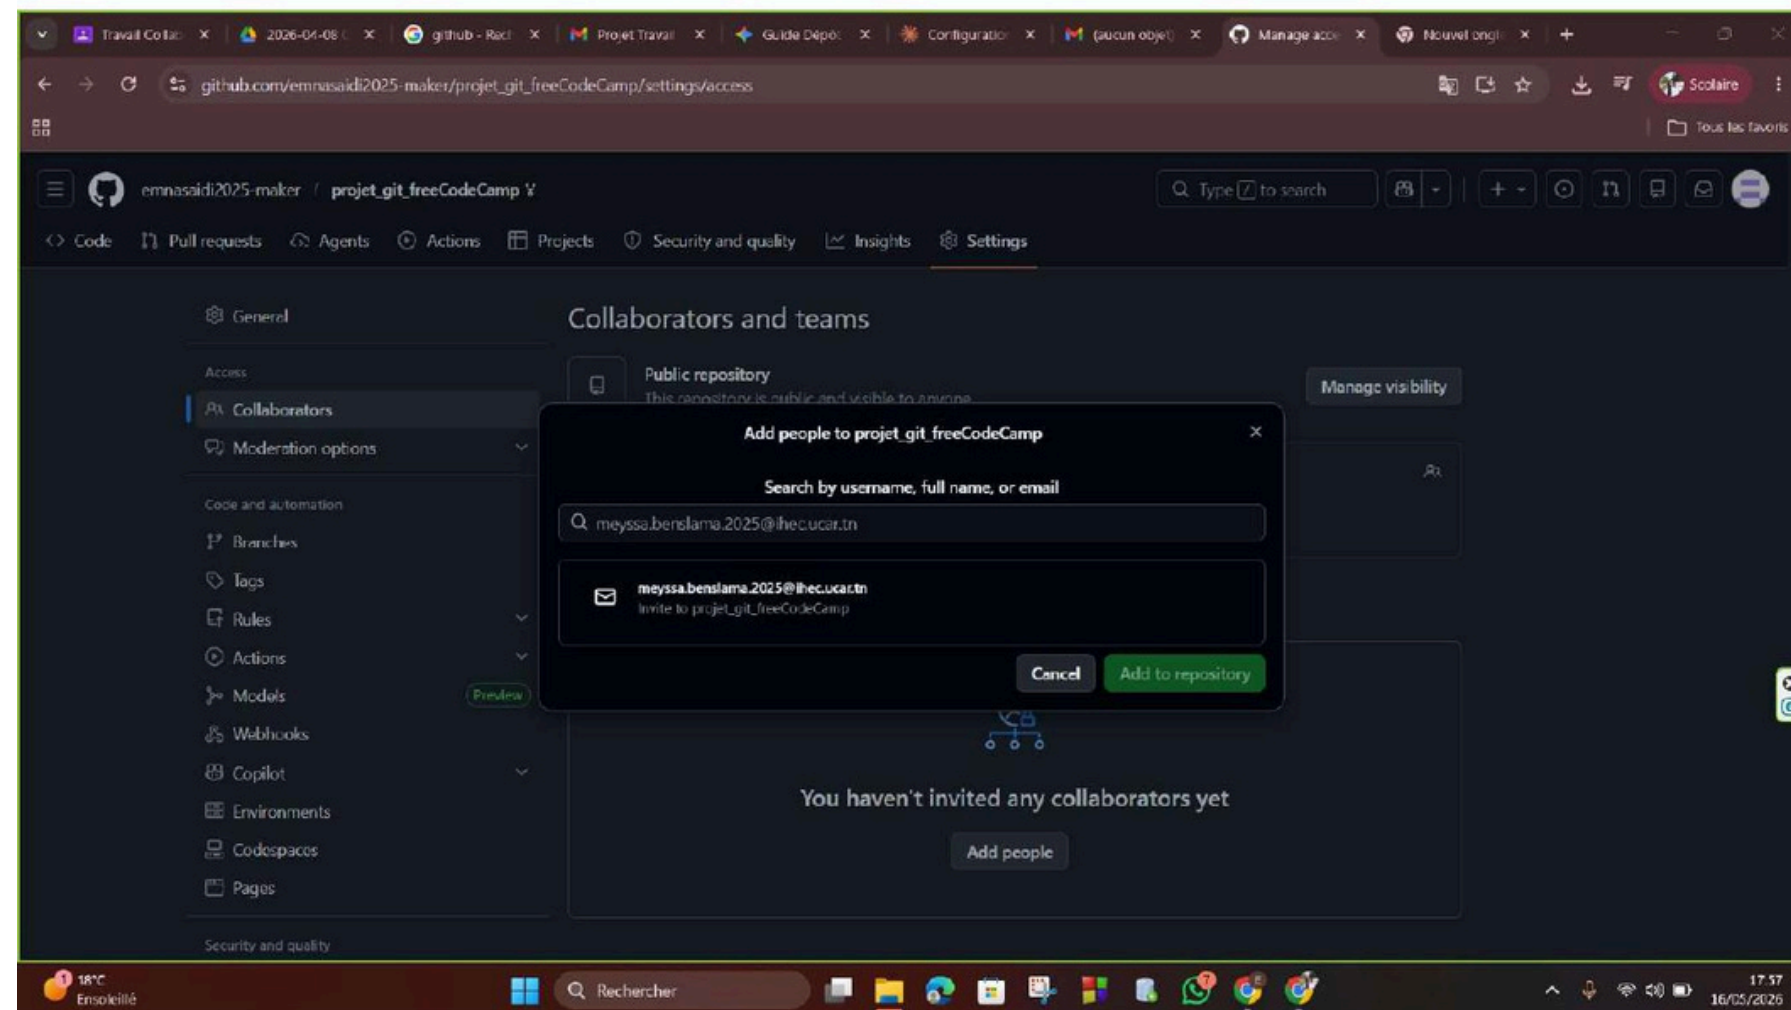

GitHub: Create a new fork — naming the repository `projet_git_freeCodeCamp`

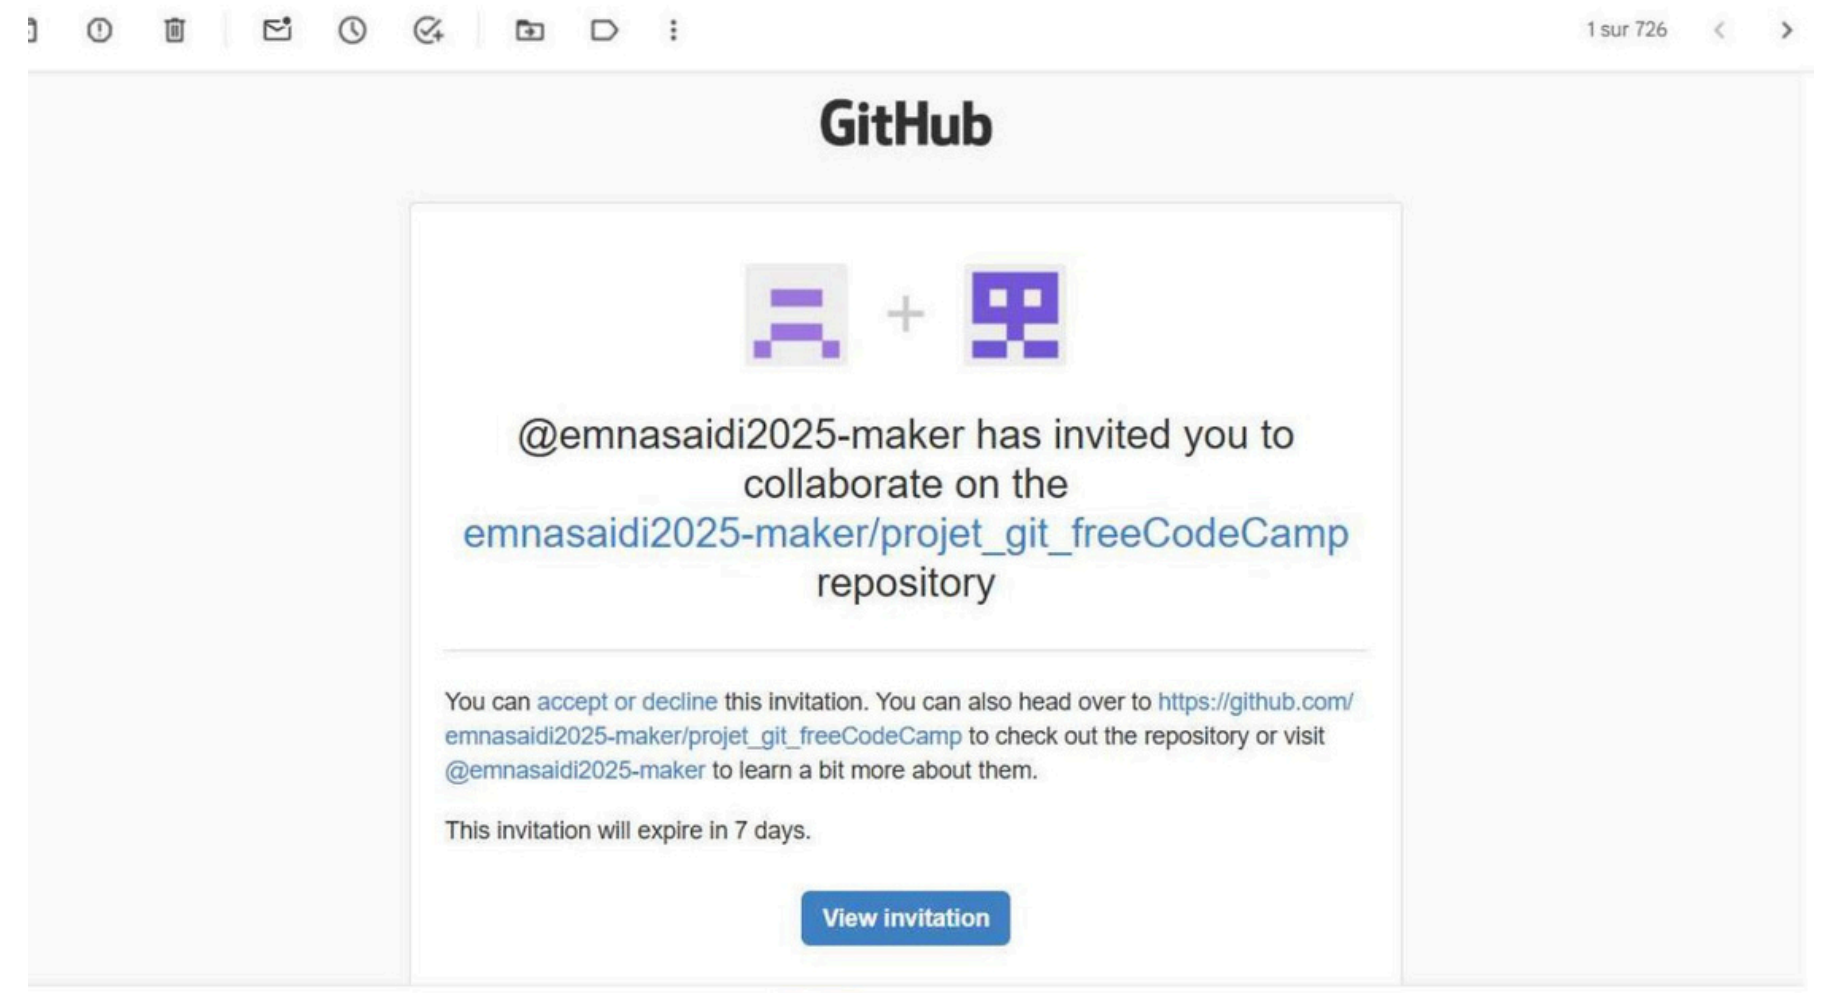

Forked repository ready — main branch, up to date with `freeCodeCamp:main`

03 | Invite Collaborator

To work as a team, SAIDI Emna (repository owner) went to Settings → Collaborators → Add people and searched for Meyssa by her academic email (meyssa.benslama.2025@ihec.ucar.tn). Meyssa received a GitHub invitation email, accepted it, and gained push access to the repository, allowing her to work directly on branches.

Settings → Collaborators: searching and adding Meyssa by email

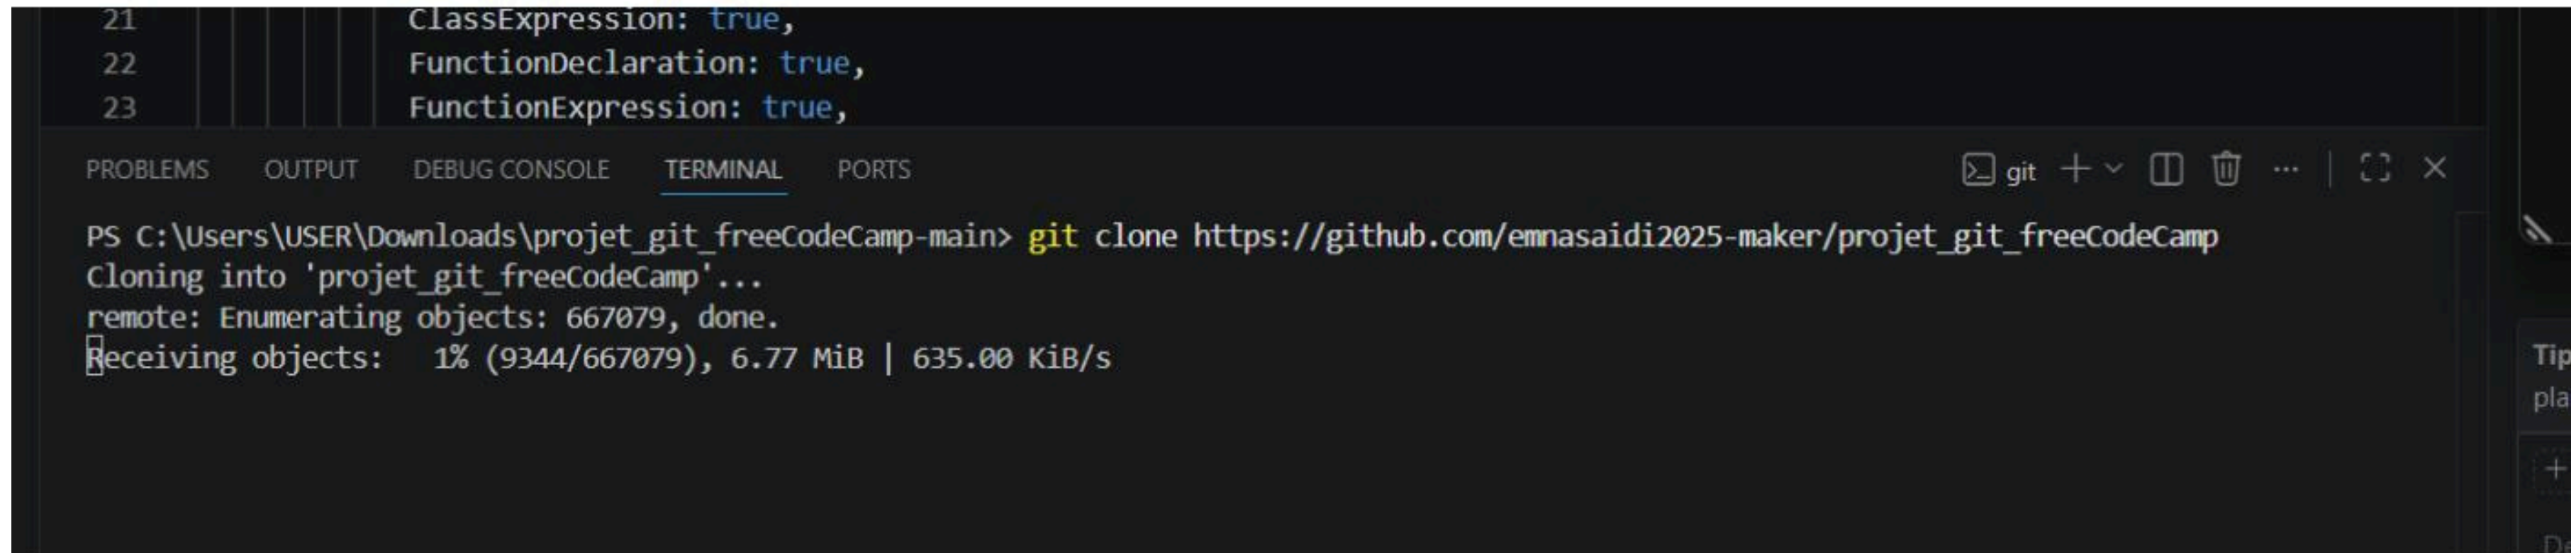

GitHub invitation email received and accepted by the collaborator

04 | git clone — Get the Repository Locally

We cloned the forked repository to a local machine using the integrated terminal in VS Code. The git clone command downloaded the full repository history (667,079 objects, 558 MiB) and automatically configured the remote origin, allowing future push and pull operations to target our fork on GitHub.

```
git clone https://github.com/emnasaidi2025-maker/projet_git_freeCodeCamp
```

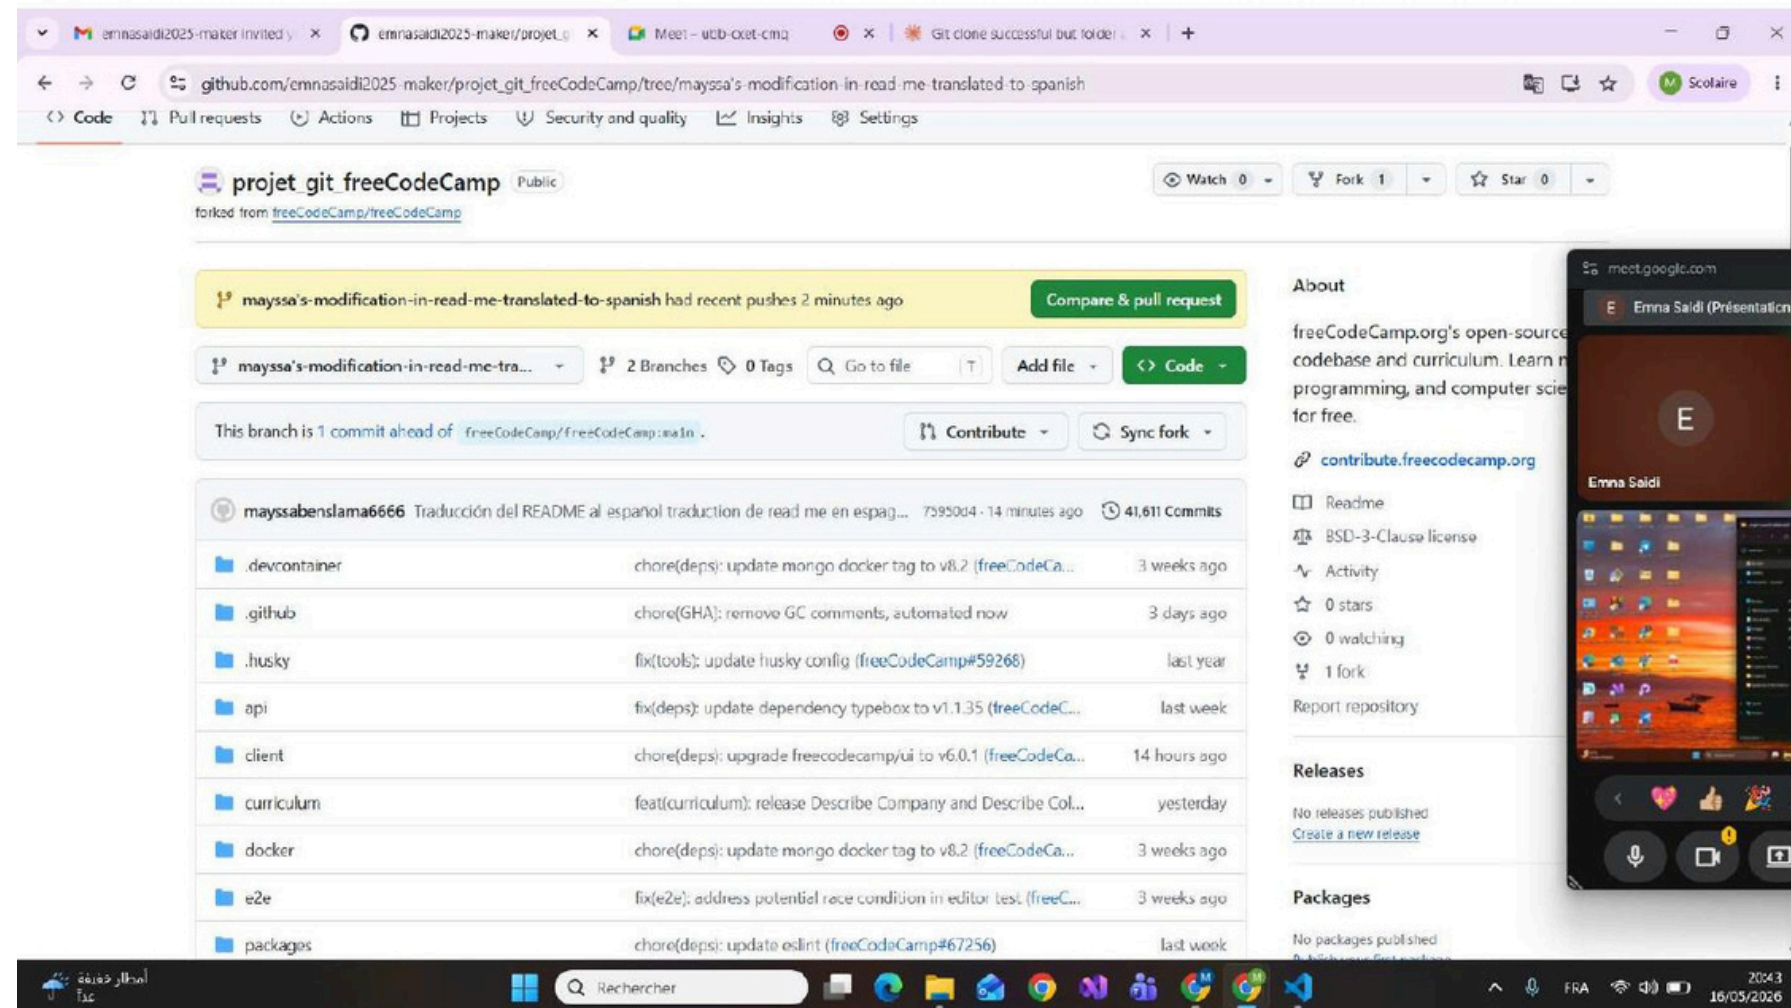

The screenshot shows a VS Code editor with a terminal window open. The terminal displays the output of the `git clone` command. The command is `git clone https://github.com/emnasaidi2025-maker/projet_git_freeCodeCamp`. The output shows the cloning process, including enumerating objects and receiving them. The terminal window has tabs for PROBLEMS, OUTPUT, DEBUG CONSOLE, and TERMINAL. The TERMINAL tab is active. The output text is as follows:

```
21 ClassExpression: true,  
22 FunctionDeclaration: true,  
23 FunctionExpression: true,  
  
PS C:\Users\USER\Downloads\projet_git_freeCodeCamp-main> git clone https://github.com/emnasaidi2025-maker/projet_git_freeCodeCamp  
Cloning into 'projet_git_freeCodeCamp'...  
remote: Enumerating objects: 667079, done.  
Receiving objects: 1% (9344/667079), 6.77 MiB | 635.00 KiB/s
```

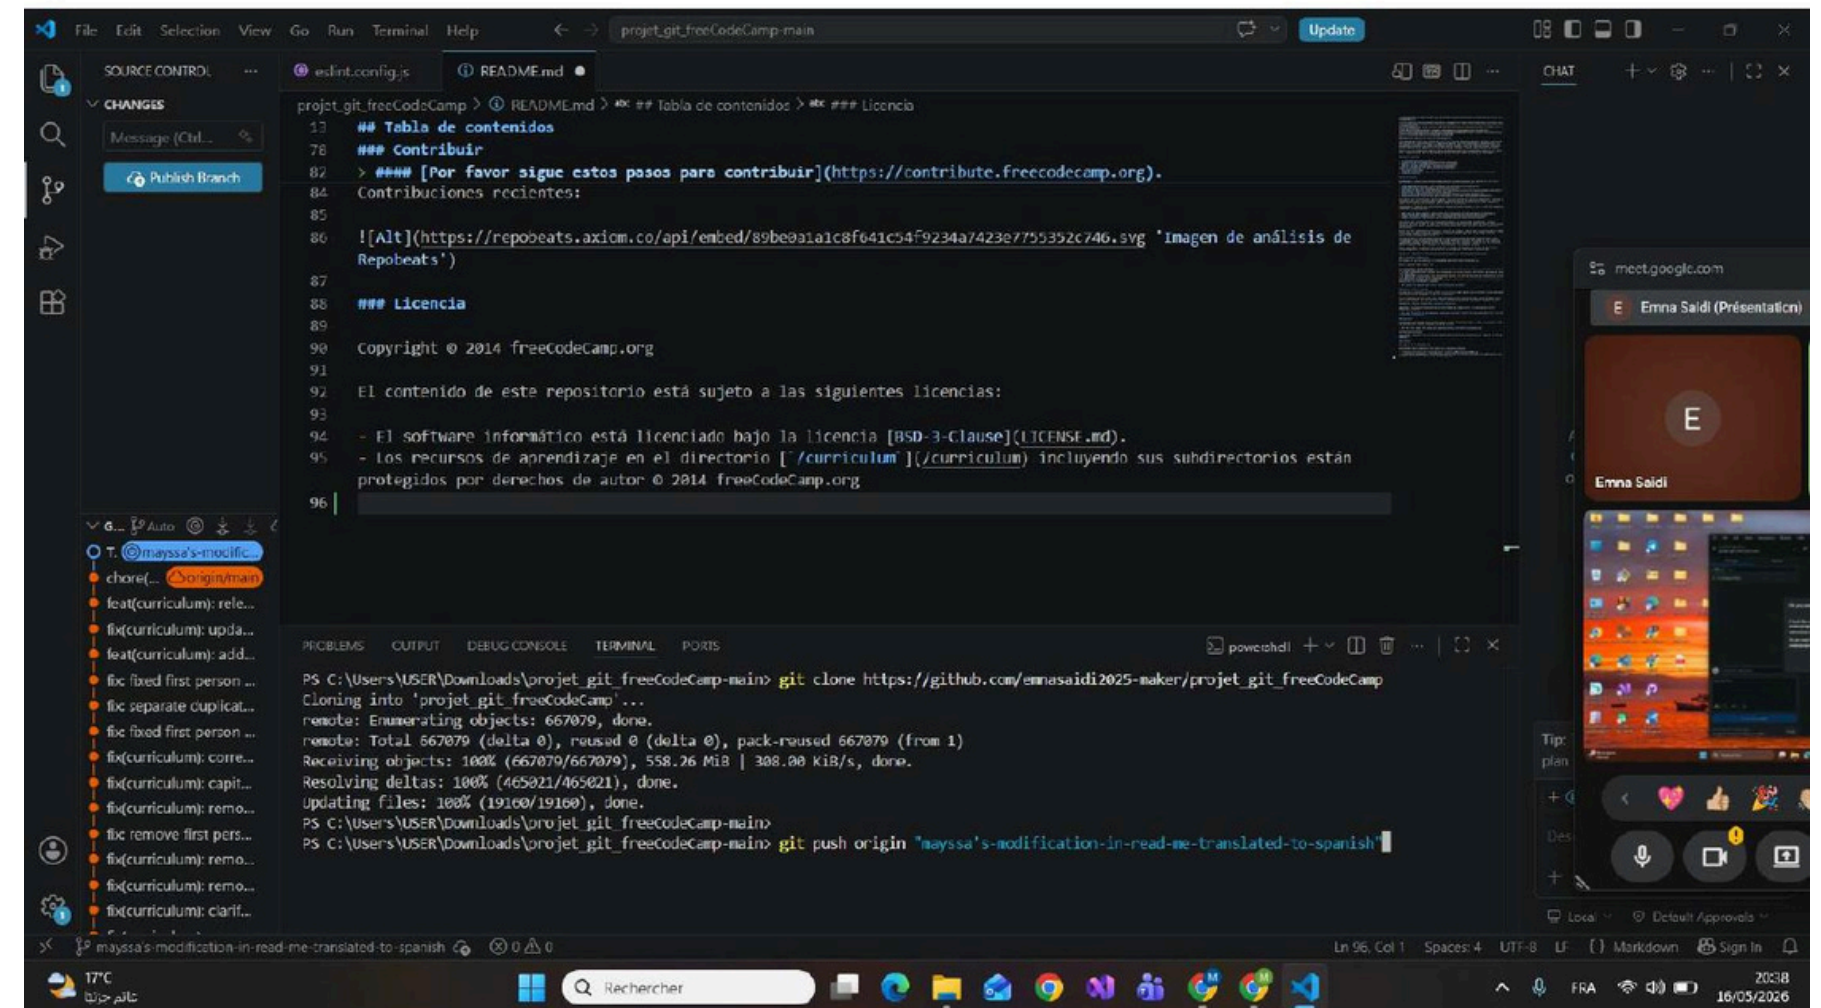

Terminal output: cloning 667,079 objects at 308–635 KiB/s — clone complete

05 | New Branch & README Translation

Meyssa created a new feature branch named mayssa's-modification-in-read-me-translated-to-spanish directly in VS Code to isolate her changes from the main branch. She then opened README.md in the editor and translated the entire file from English into Spanish — 51 lines added and 51 deleted.

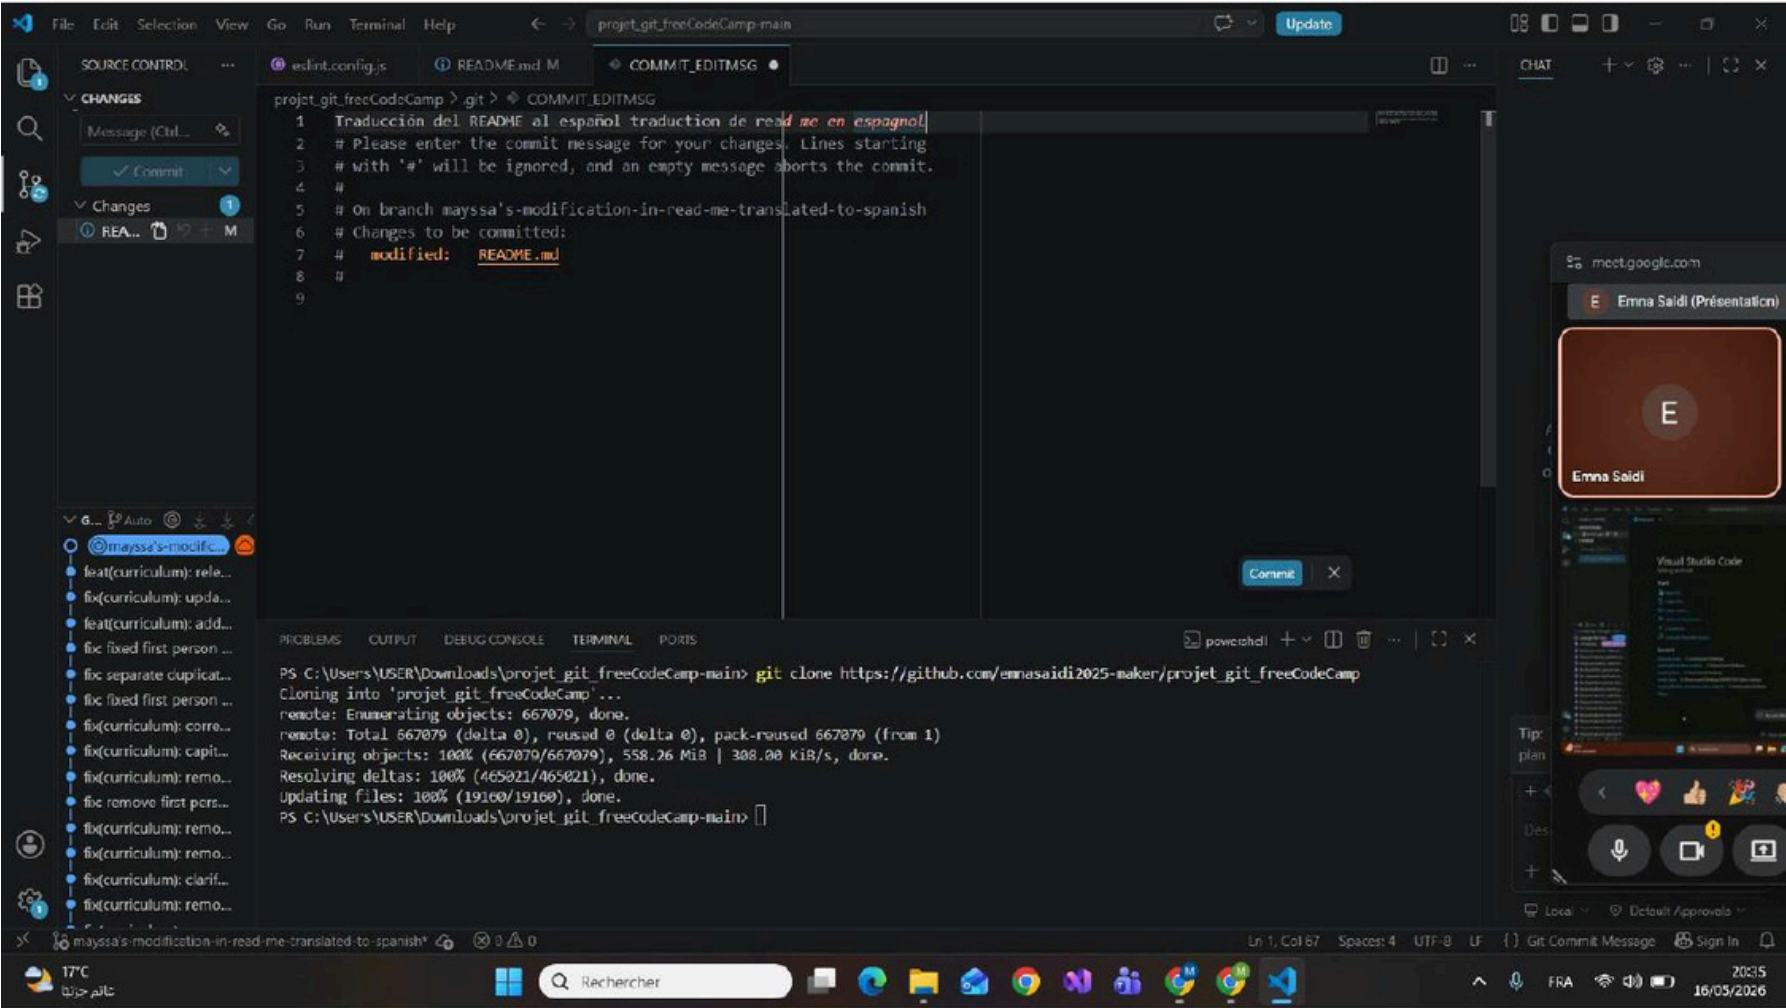

Fork repo: feature branch visible with recent push & Compare/PR button

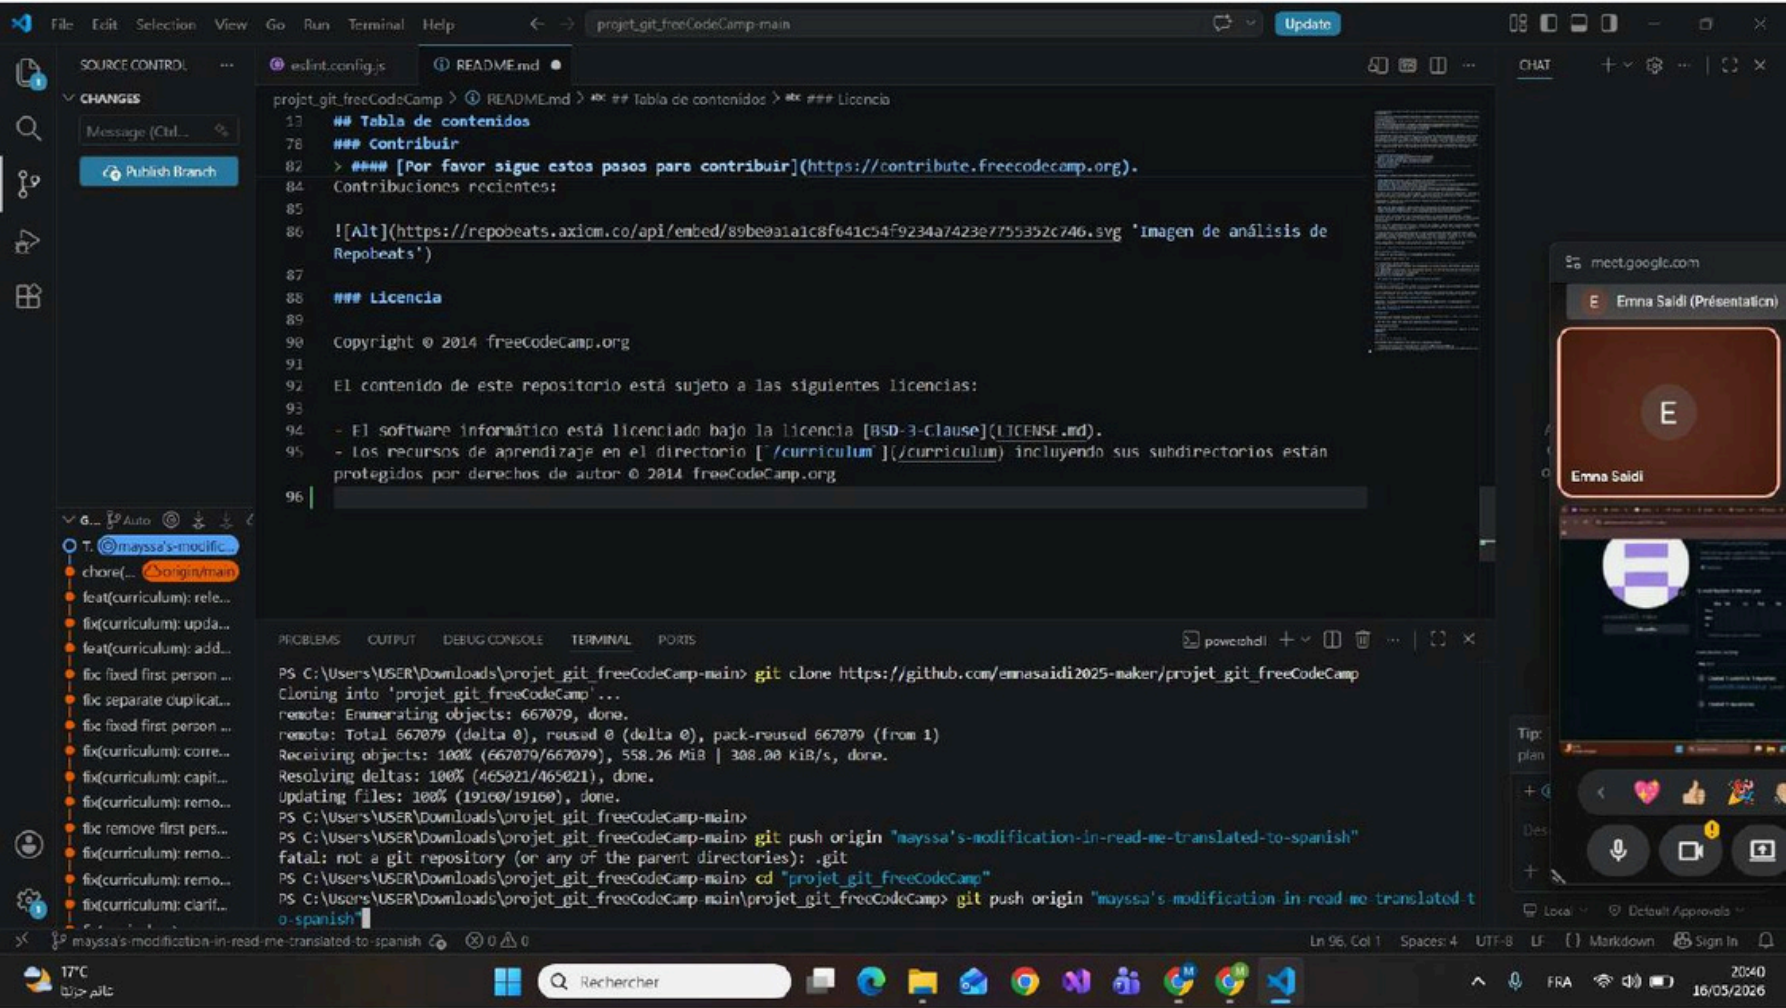

VS Code editor: README.md fully translated to Spanish

06 | Commit & Push the Branch

After editing README.md, Meyssa opened the Source Control panel in VS Code. The modified file appeared under Changes — she staged it, typed the commit message 'Traducción del README al español traduction de read me en espagnol', confirmed the commit via COMMIT_EDITMSG, then clicked Sync Changes to push the branch to the remote repository.

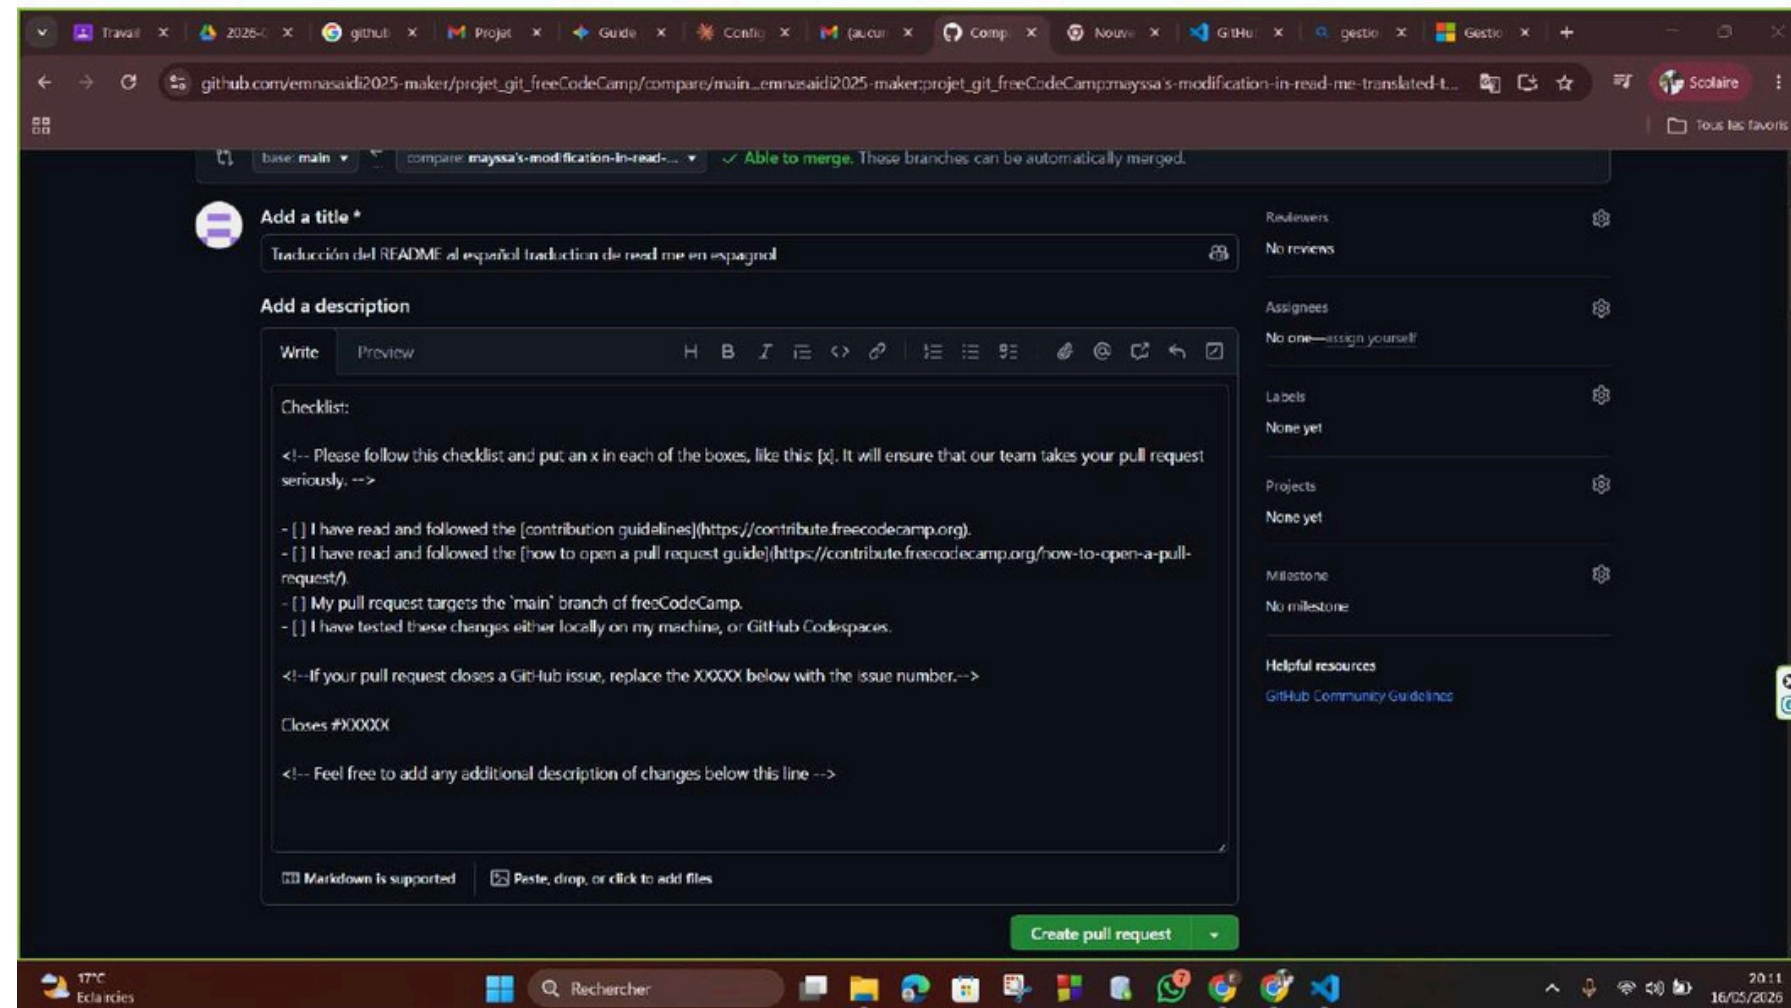

COMMIT_EDITMSG: commit message for the README translation

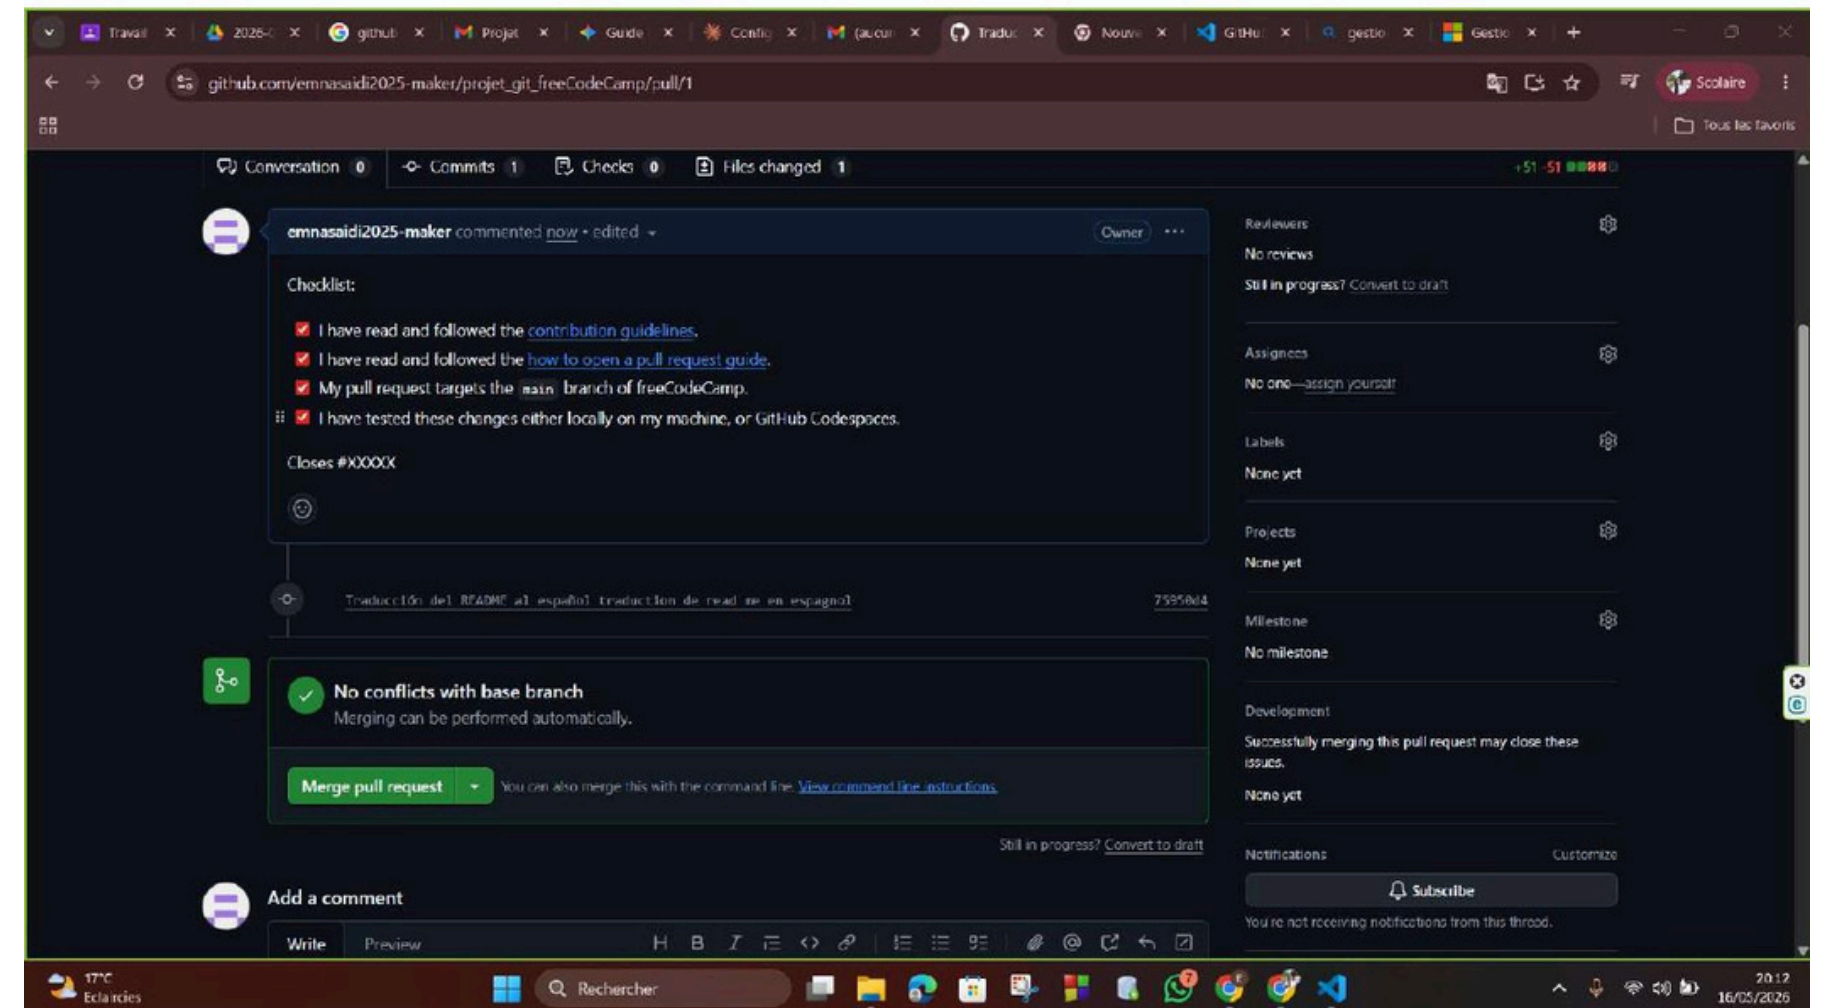

VS Code terminal: branch pushed to origin — push complete

07 | Pull Request & Merge

After the push, GitHub displayed a Compare & Pull Request banner. SAIDI Emna opened a Pull Request (PR #1 on the fork, PR #67437 on freeCodeCamp) with the contribution checklist fully filled in. The diff confirmed 1 file changed with +51/-51 lines. No conflicts were found and the merge was completed automatically.

Pull Request form: title, checklist filled, targeting freeCodeCamp:main

PR #1 — No conflicts detected, merge performed automatically

08 | Merge Summary

The merge successfully integrated Meyssa's README translation branch into the main branch of the repository. The table below summarises all key information about the Pull Request and resulting merge commit.

Pull Request:	#1 (fork) / #67437 (freeCodeCamp)
Branch merged:	mayssa's-modification-in-read-me-translated-to-spanish → main
Merge commit:	57f33f0 (Verified )
Translation commit:	75950d4 by mayssabenslama6666
File changed:	README.md
Lines changed:	+51 additions / -51 deletions
Conflicts:	None — merged automatically
Status:	 Successfully merged into main

 I have tested these changes either locally on my machine, or GitHub Codespaces.
Closes #XXXXX

Labels
None yet

09 | Commit & Sync — translations.json

After the merge, SAIDI Emna edited the translations.json file (client/i18n/locales/english/), which contains all English UI strings displayed across the freeCodeCamp platform — labels such as 'Welcome back', 'Learn', 'Skip to content', 'Happy coding!', etc. The file was modified in VS Code, staged in Source Control, committed with a clear message, and synced to main.

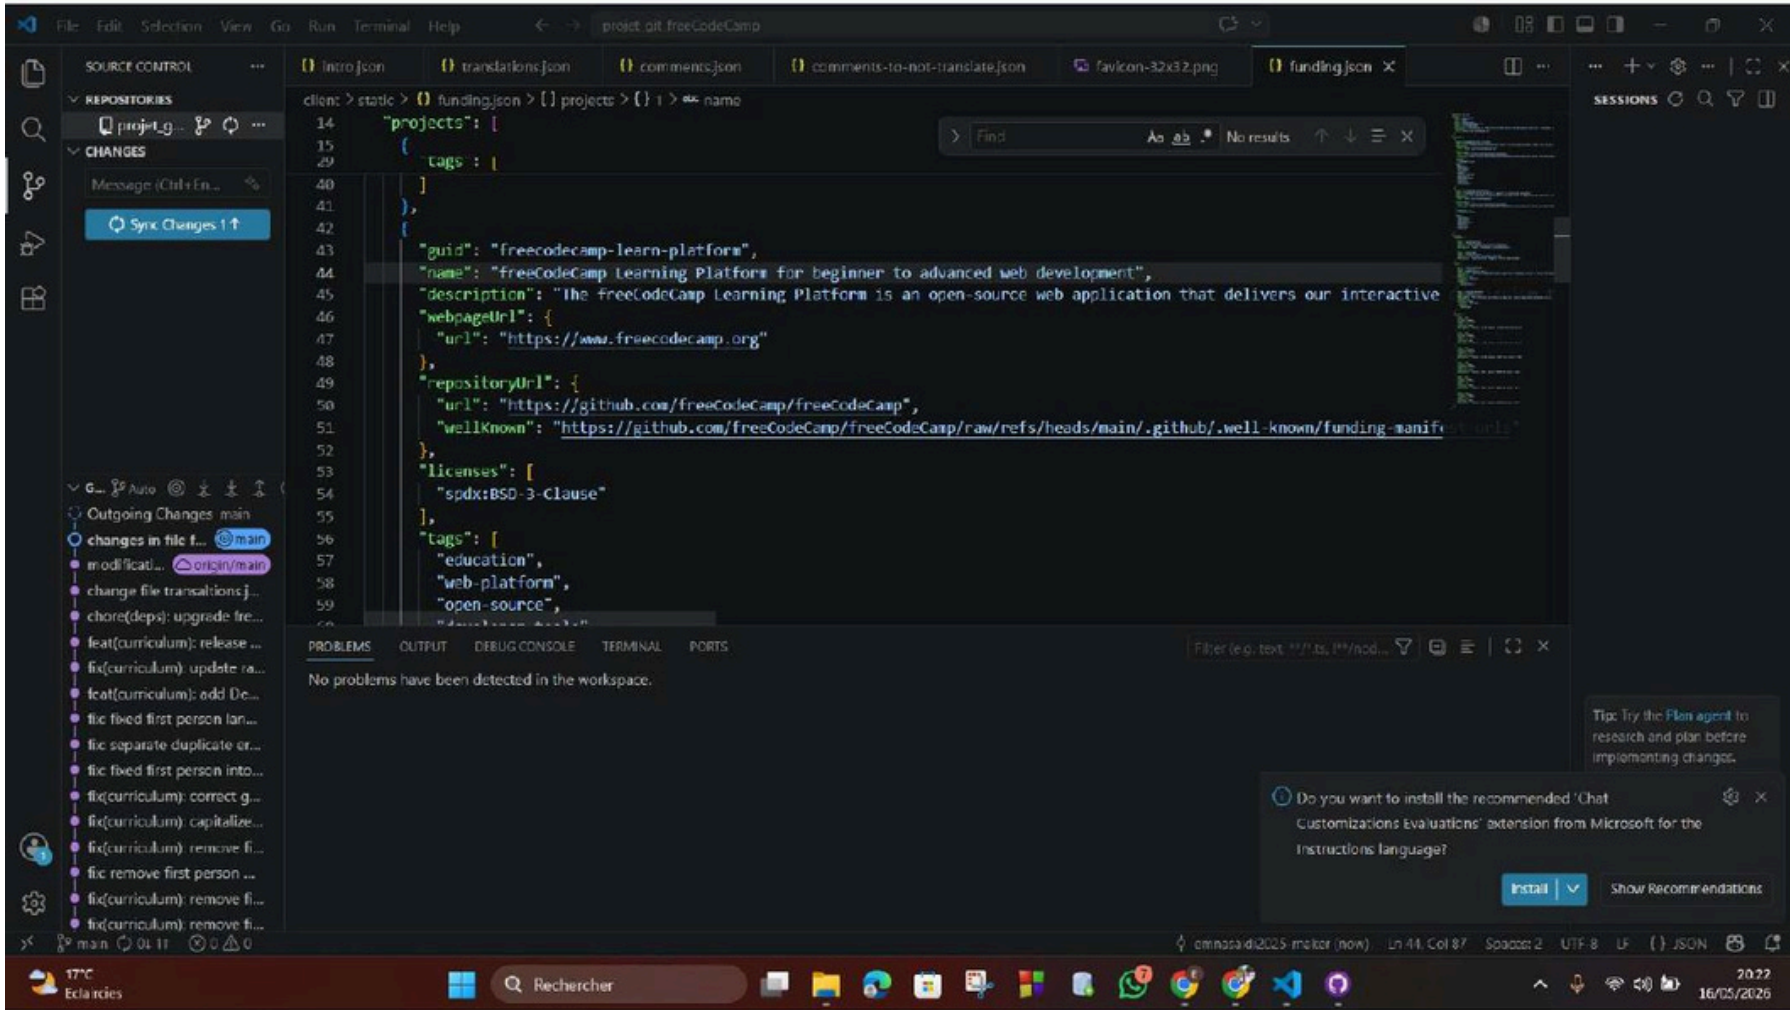

VS Code: translations.json modified — English UI strings updated

Commit Details	
File:	client/i18n/locales/english/translations.json
Commits:	ffa8a64 → 34fc930 (2 commits)
Message 1:	'change file transaltions.json in english'
Message 2:	'modification fichier translations.jsons'
Action:	Edit → Stage → ✓ Commit → Sync Changes ↑
Branch:	main (direct commit after merge)

Commit & Sync performed via VS Code Source Control

10 | Commit & Sync — funding.json

SAIDI Emna edited the funding.json file (client/static/), which stores metadata about the freeCodeCamp project — its name, description, website URL, repository URL, license (BSD-3-Clause), and topic tags. The file was modified in VS Code and committed to main with the message 'changes in file funding.json', then synced to the remote.

VS Code: funding.json modified — project funding metadata updated

Commit Details	
File:	client/static/funding.json
Commit:	73d84e3
Message:	'changes in file funding.json'
Content:	Project name, description, URLs, license, tags
Action:	Edit → Stage → ✓ Commit → Sync Changes ↑
Branch:	main (direct commit)

Commit & Sync performed via VS Code Source Control

11 | Commit & Sync Summary

After the branch merge, three additional commits were made directly on main by SAIDI Emna. All commits followed the same VS Code Source Control workflow: edit the file → stage changes → write commit message → click ✓ Commit → click Sync Changes ↑ to push to the remote repository.

ffa8a64

change file transaltions.json in english

File: translations.json

By: emnasaidi2025-maker

Edit → Commit → Sync ↑

34fc930

modification fichier translations.jsons

File: translations.json

By: emnasaidi2025-maker

Edit → Commit → Sync ↑

73d84e3

changes in file funding.json

File: funding.json

By: emnasaidi2025-maker

Edit → Commit → Sync ↑

All 3 commits were made on the main branch via VS Code Source Control — no terminal commands were required.

12 | Commit History — May 16, 2026

The commits/main page on GitHub shows the complete chronological log of all work performed on May 16, 2026. Five commits are visible: three by SAIDI Emna (funding + translations updates), the merge commit (57f33f0  Verified) and Meyssa's README translation commit (75950d4).

Key Takeaways

This project guided us through a complete real-world collaborative Git workflow on an actual open-source codebase.

01 Fork

Created a personal copy of freeCodeCamp (445k ★) without touching the original repository.

02 Collaborate

Invited a team member via Settings → Collaborators to enable shared push access.

03 Clone

Cloned the fork locally with `git clone`, downloading the full Git history (558 MiB).

04 Branch & Edit

Created a feature branch to translate README.md, keeping main stable throughout.

05 Commit & Push

Staged changes in VS Code Source Control, committed with a clear message, and synced to origin.

06 PR & Merge

Opened a Pull Request, reviewed the diff, and merged the branch into main (commit 57f33f0).
